Class TextBoxHelper

Inheritance

↳ System.Object
  ↳ TextBoxHelper

Namespace: Recycle.UserControls (Recycle.UserControls.html)

Assembly: Recycle.dll

Syntax

```
public class TextBoxHelper : object
```

Fields

HasTextProperty

Declaration

```
public static readonly DependencyProperty HasTextProperty
```

Field Value

Type	Description
DependencyProperty	

IsMonitoringProperty

Declaration

```
public static readonly DependencyProperty IsMonitoringProperty
```

Field Value

Type	Description
DependencyProperty	

NumericProperty

Declaration

```
public static readonly DependencyProperty NumericProperty
```

Field Value

Type	Description
DependencyProperty	

UseOskProperty

Declaration

```
public static readonly DependencyProperty UseOskProperty
```

Field Value

Type	Description
DependencyProperty	

WatermarkProperty

Declaration

```
public static readonly DependencyProperty WatermarkProperty
```

Field Value

Type	Description
DependencyProperty	

Methods

GetHasText(DependencyObject)

Declaration

```
public static bool GetHasText(DependencyObject obj)
```

Parameters

Type	Name	Description
DependencyObject	*obj*	

Returns

Type	Description
System.Boolean	

GetIsMonitoring(DependencyObject)

Declaration

```
public static bool GetIsMonitoring(DependencyObject obj)
```

Parameters

Type	Name	Description
DependencyObject	*obj*	

Returns

Type	Description
System.Boolean	

GetNumeric(DependencyObject)

Declaration

```
public static bool GetNumeric(DependencyObject obj)
```

Parameters

Type	Name	Description
DependencyObject	*obj*	

Returns

Type	Description
System.Boolean	

GetUseOsk(DependencyObject)

Declaration

```
public static bool GetUseOsk(DependencyObject obj)
```

Parameters

Type	Name	Description
DependencyObject	*obj*	

Returns

Type	Description
System.Boolean	

GetWatermark(DependencyObject)

Declaration

```
public static string GetWatermark(DependencyObject obj)
```

Parameters

Type	Name	Description
DependencyObject	*obj*	

Returns

Type	Description
System.String	

SetHasText(DependencyObject, Boolean)

Declaration

```
public static void SetHasText(DependencyObject obj, bool value)
```

Parameters

Type	Name	Description
DependencyObject	*obj*	
System.Boolean	*value*	

SetIsMonitoring(DependencyObject, Boolean)

Declaration

```
public static void SetIsMonitoring(DependencyObject obj, bool value)
```

Parameters

Type	Name	Description
DependencyObject	*obj*	
System.Boolean	*value*	

SetNumeric(DependencyObject, Boolean)

Declaration

```
public static void SetNumeric(DependencyObject obj, bool value)
```

Parameters

Type	Name	Description
DependencyObject	*obj*	
System.Boolean	*value*	

SetUseOsk(DependencyObject, Boolean)

Declaration

```
public static void SetUseOsk(DependencyObject obj, bool value)
```

Parameters

Type	Name	Description
DependencyObject	*obj*	
System.Boolean	*value*	

SetWatermark(DependencyObject, String)

Declaration

```
public static void SetWatermark(DependencyObject obj, string value)
```

Parameters

Type	Name	Description
DependencyObject	*obj*	
System.String	*value*
